A few precautions can prevent future pain

Kelli Crosby

You brush your teeth daily because you don't want cavities or gum disease, right? Well, what do you do on a daily basis to prevent tension in your neck? Brushing your teeth offers you preventive dental care, but what if you could learn to be preventive with the rest of your body?

We all have bad daily habits we don't even notice until something starts to hurt. These bad habits are the root cause of many painful conditions. To help prevent pain, however, we can turn these bad habits into good habits that can be worked into our daily routine. Here is some general advice that can apply to almost every part of daily living.

Sit Up Straight.

Sit in a chair with your hands on your hips. Slouch. Feel how your hips roll back (if you're wearing jeans, you'll be sitting on your pockets). Now sit up straight by moving your pelvis forward and centering your weight over your pelvis and off your buttocks.

Sleep on Your Back or Side.

Sleeping on your stomach makes you twist your neck and body in order to breathe. This twisted position is terrible for your spine, especially for prolonged periods during sleep. Check your pillow and make sure it has a thickness that will support your neck in a position neutral to the rest of your spine. Try a

Never lose an opportunity of seeing anything beautiful, for beauty is God's handwriting.

-Ralph W. Emerson

Even just a few minutes at work can help turn bad habits into good ones.

Don't Slouch.

Slouching puts strain on your neck and can give you a headache. Your head weighs roughly 10 pounds-about as much as a bowling ball. Your spine is designed to balance that bowling ball when you're in an upright posture. If you slouch, your muscles have to do more work to hold your head up, which makes your muscles tight and angry.

memory-foam contour pillow, especially if you are a side sleeper.

Bend with a Straight Spine.

Bending over with a curved back puts pressure on your disc material and strains the spine. The pressure created during incorrect bending can cause the

discs to bulge and put pressure on spinal nerves. Your back was not made to lower and raise your body—that's what your buttocks, hips, and knees are for.

Stand with your knees shoulder-width apart and pretend you are going to lift a 50-pound box off the floor. If you are bending your knees and hips and using your legs to lower and raise your body weight, you are lifting correctly. Now, use the same technique to pick your shoes up off the floor. Think about a squatting movement when you need to lean forward, too—such as while washing your face in the sink. Let your hips and knees do the work.

Take Regular Stretch Breaks.

The muscles in your arms and hands get tight when you grip or pull. The muscles in your neck and shoulders get tight when you reach forward or away from your body. Give these muscles a break with a simple stretch.

It only takes 10 seconds to lengthen the tight tissue, which will take pressure off your joints and prevent chronic conditions like tendinitis and bursitis. Watch for opportunities to work in a brief stretch.

Undo Yourself.

Evaluate the position of your body during your daily activities and make sure you "undo" that position during the day. There is no way to teach a stretch for every single activity you do, but if you take the time to reverse the position of the joint and stretch in the opposite direction, you will lengthen tight tissue and reduce repetitive strain on joints.

Tips to Save Your Body

Replacing bad habits with good ones takes time and thought, but the effort is well worth it. Here are some helpful tips to keep you on track.

-- If you keep waking up on your stomach, wear a pair of gym shorts to bed and put a golf ball in each pocket. When you roll onto your stomach, the golf balls will wake you up and you can return to your back or side.

-- When unloading the dishwasher and getting laundry out of the machine, pose

like a tennis player waiting for a serve. The knees are over your toes (but not beyond the toes), buttocks are backward, and shoulders are forward.

-- Don't try to carve out 30 minutes daily for a stretching routine. If you stretch regularly throughout the day, you will be more effective at keeping tissue loose. Remember, it only takes 10 seconds to stretch a muscle—so find those seconds during your day and make the most of them.

-- Think about stretching the same way you think about hydration. Don't wait until you're thirsty to drink water; by then you're already dehydrated. If you wait until something hurts before you stretch, you could develop chronic tension that can lead to everything from a headache to tendinitis.

A daily stretching routine will help

prevent future issues and address current ones. Don't wait until it's a problem. Start stretching today and, little by little, your body will thank you.

Stretching for 10 seconds can take pressure off your joints and help relieve pain.

The Wonders of Water

For Skin Health and More

Shelley Burns, N.D.

Creams, nutritional supplements, treatments, lotions, and potions. We are always looking for the next miracle product to keep skin looking healthy and young. However, there is one essential, inexpensive, and often overlooked nutrient right at your fingertips: water.

Just as a car cannot function without oil, our bodies cannot function without water. After oxygen, H₂O is the most important component of the body, responsible for 65-70 percent of its composition. And of this, 80 percent is dedicated to the skin.

Water is the medium for various enzymatic and chemical reactions in the body. It moves nutrients, hormones, antibodies, and oxygen through the blood and lymphatic systems, and it also helps form the matrix of the skin. Devoid of water, the skin becomes dehydrated, resulting in a dry, dull tone.

It's likely that the moment a person feels

thirsty, mild dehydration has already set in. To keep the complexion looking smooth and blemish-free, drink water upon waking and continue drinking it throughout the day at one- to two-hour intervals. At least six 8-oz. glasses of water should be consumed daily and more if you are exercising, perspiring, and/or in hot weather. Ideally, intake should be between ten and twelve 8-oz. glasses of water a day. One note: Don't increase water intake all at once, as the kidneys and digestive system need time to adjust. Add one 8-oz. glass every day or every second day.

What counts toward your daily water intake? Just the basics: water and herbal tea. Caffeinated beverages and alcoholic drinks are diuretics that can contribute to dehydration, requiring even more hydration after drinking.

Not only is water important for skin health, it can also play a key role in the prevention of disease. Drinking eight glasses of water a day can decrease the

risk of colon cancer, bladder cancer, and potentially even breast cancer.

Water helps keep the body at optimum health.

Handwashing for Your Health

HANDWASHING FOR YOUR HEALTH

You know that washing your hands is important, but studies suggest that how you wash your hands is even more important. Washing frequently and thoroughly can help keep you, and the people you come in contact with, healthier.

STAY CLEAN, STAY HEALTHY

Researchers in Denmark conducted a study in which students at one school were required to wash their hands three times a day. According to the study, which was published in the American Journal of Infection Control (August 2011), the children that learned new habits significantly reduced their amount of absences due to illness.

HAND SANITIZERS VS. SOAP?

A study by the American College of

Preventive Medicine showed that alcohol-based hand sanitizers are less effective than soap at preventing outbreaks of norovirus in long-term care facilities. Alcohol-based hand sanitizers clean the skin by killing some bacteria, diseases, and germs on the skin's surface, but they don't actually remove dirt.

The CDC recommends using these sanitizers with at least 60 percent alcohol if soap and clean, running water are not available. Here is some more hand-washing advice from the CDC:

WHEN SHOULD YOU WASH YOUR HANDS?

- Before, during, and after preparing food and before eating
- Before and after caring for someone who is sick
- Before and after treating a cut

- After using the toilet or changing diapers
- After blowing your nose, coughing, or sneezing
- After touching an animal or animal waste
- After touching garbage

WHAT IS THE RIGHT WAY TO WASH YOUR HANDS?

- Wet your hands with clean, running water and apply soap.
- Rub your hands together to make lather, then scrub the entire hand.
- Don't forget the backs of your hands, between your fingers, and under your nails.
- Continue for at least 20 seconds.
- Rinse your hands well under running water.
- Dry your hands using a clean towel or air-dry them.
